# 40/40UFL ULTRA FAST UV-IR

Combined Explosion and High Sensitivity Flame Detector

### **SharpEye**

*The new SharpEye UV-IR High-Speed Optical Flame detector 40/40UFL is designed to meet two major requirements:* 

- High-Speed Response (20 msec)

- High Reliability (immunity to false alarm) This detector is based on our well known military detector used in Armored Vehicle Explosion Suppression System combined with the industrial UV-IR detector 40/40LB.

*The 40/40UFL can detect hydrocarbon-based fuel and gas fires, hydroxyl and hydrogen fires, as well as metal and inorganic fires.* 

The UV/IR flame detector senses radiant energy in the short wave section of both the ultraviolet and infrared portions of the electromagnetic spectrum. The signals from both sensors are analyzed for frequency, intensity and duration. Simultaneous detection of radiant energy in both the UV and IR sensors triggers an alarm signal.

The UV sensor incorporates a special logic circuit that helps prevent false alarms caused by solar radiation.
